3	Remedial Actions Required at Klickitat Hatchery - URB Fall Chinook
4	Adult Contribution to Fisheries, Spawning Grounds and Hatcheries: Klickitat Hatchery - URB Fall Chinook

5 Annual Operating Expenses: Klickitat Hatchery - URB Fall Chinook

6 Annual Operating Expenses - Klickitat Hatchery

Executive Summary

This report presents the findings of the independent audit of the Klickitat Hatchery - URB Fall Chinook program. The hatchery is located in a remote area on the Klickitat River at river mile 42, near the town of Glenwood, Washington. The hatchery is used for adult collection, incubation, and rearing of spring chinook and the incubation and rearing of URB fall chinook and coho (Type N).

The audit was conducted in 1996-1997 as part of a 2-year effort that will include 67 hatcheries and satellite facilities located on the Columbia and Snake River system in Idaho, Oregon, and Washington. The hatchery operating agencies include the U.S Fish and Wildlife Service, Idaho Department of Fish and Game, Oregon Department of Fish and Wildlife, and Washington Department of Fish and Wildlife.

Background

The audit is being conducted as a requirement of the Northwest Power Planning Council (NPPC) Strategy for Salmon and the Columbia River Basin Fish and Wildlife Program. Under the audit, the hatcheries are evaluated against policies and related performance measures developed by the Integrated Hatchery Operations Team (IHOT). IHOT is a multi-agency group established by the NPPC to direct the development of new basinwide standards for managing and operating fish hatcheries. The Bonneville Power Administration (BPA) contracted with Montgomery Watson to act as an independent contractor for the audit.

IHOT has established five basic policies that cover: (1) hatchery coordination, (2) hatchery performance standards, (3) fish health, (4) ecological interaction, and (5) genetics. The audit focuses on all these policies, with the exception of hatchery coordination. These policies are set forth in *Policies and Procedures for Columbia Basin Anadromous Salmonid Hatcheries (IHOT 1995)*. That document is the source for the performance measures that are the basis of this audit.

The Audit Process

The audit was based on the facility management's response to a 109-page questionnaire. This audit form was completed through a five-step process in which:

- Information was obtained from headquarters.
- The hatchery manager was asked to fill out and return the audit form.
- A 1-2 day site audit visit was conducted to inspect facilities, review hatchery records, discuss audit form responses, and develop remedial action plans.
- A compliance report was developed to document the compliance status of each performance measure. This report was then shared with the hatchery manager and IHOT representative.
- This hatchery evaluation report was written to document compliance with IHOT performance measures and develop cost estimates for remedial actions when needed.

Klickitat Hatchery - URB Fall Chinook Results

The Klickitat facility includes one pond for adult holding, 22 concrete raceways, 12 vinyl raceways, 3 rearing ponds, and incubation facilities. Klickitat Hatchery was authorized and constructed under the Mitchell Act and began operation as part of the Columbia River Fisheries Development Program - a program to mitigate for fishery losses caused by hydroelectric system development. The purpose of the hatchery is to produce adult fall chinook, Type-N coho, and spring chinook that will contribute to NE Pacific and Columbia River Basin commercial and sport fisheries.

The Klickitat Hatchery - URB Fall Chinook program was in general compliance with most of the performance measures. In the area of program objectives, the hatchery was not meeting its adult return goal and needed to document its adult contribution. The audit found that the hatchery was not in compliance with the water quality monitoring criteria, screen approach criteria, alarm requirements, predation control facilities, and pathology-free water criteria, which are all facilities requirements. The hatchery was not meeting the loading and flow criteria for incubation. The hatchery needed to develop a smoltification goal, a smoltification monitoring plan, and specific incubation and rearing standards for the IHOT Operations Plan. The hatchery did not have a Genetics Monitoring and Evaluation Program.

The specific areas in which the Klickitat Hatchery - URB Fall Chinook program requires remedial actions based on the IHOT performance measures are listed below. These remedial actions are listed in alphabetical order without intent of ranking or otherwise assigning priority:

- Conduct IHOT QA/QC tests for feed preparation
- Develop additional water supply for rearing or construct water reuse system
- Develop approved genetics M&E plan
- Develop smoltification goal and monitor
- Develop specific incubation and rearing standards for IHOT Operations Plan
- Document adult contribution

- Follow IHOT flow and loading criteria for incubation or change criteria
- Follow IHOT protocols for checking flow alarms daily
- Install alarms at 3 intakes and 2 ponds
- Install security alarms
- Install telephone pagers
- Monitor and record DO and TGP
- Provide bird screening for 108,000 sf of rearing area
- Provide disease-free water for incubation and early rearing
- Provide new screening system for river (8,000 gpm) and creeks
- Review temperature criteria for rearing
- Run analysis for water chemistry parameters, turbidity, alkalinity, hardness, nitrite, and contaminants

Non-compliance issues resulting from items beyond human control or Performance Measures not relevant to this hatchery (Type 1 in Table 3, Section 4 of this report) were not listed above.

Facility Description

Name: Klickitat Fish Hatchery

Stock/Species: Spring Chinook

URB Fall Chinook

Coho (Type N)

Operating Agency: Washington Department of Fish and Wildlife

Funding Agency: Mitchell Act (NMFS)

Location: The hatchery is located in a remote area on the Klickitat River at river mile 42, near the town of Glenwood, Washington.

Address: 301 Fish Hatchery Road

Glenwood, WA 98619-9102

Hatchery Manager: Mr. Ted Anderson

Phone: (509) 364-3310

Fax: (509) 364-3639

Purpose: Klickitat Hatchery was authorized and constructed under the Mitchell Act and began operation as part of the Columbia River Fisheries Development Program - a program to mitigate for fishery losses caused by hydroelectric system development. The purpose of the hatchery is to produce adult fall chinook, Type-N coho, and spring chinook that will contribute to NE Pacific and Columbia River Basin commercial and sport fisheries.

Production Goal: Spring Chinook

Produce 600,000 yearlings for on-station release

Produce 1,200,000 subyearlings for release into the upper Klickitat River

URB Fall Chinook

Produce 4,000,000 subyearlings for on-station release

Coho (Type N)

Produce 1,350,000 yearlings for on-station releases

Water Supply:

Water rights total 28,338 gpm from four sources: Indian Ford Springs, an unnamed spring (designated Indian Ford ÒBÓ), Wonder Springs, and the Klickitat River.

Facilities:

Adult Holding:	1 concrete adult holding pond - 12,000 cf
Incubation:	72 full stacks of vertical tray incubators (1008 trays)
	28 shallow troughs
Early Rearing:	None
Raceways:	22 concrete raceways - 3,000 cf each
	12 vinyl raceways - 1,600 cf each (BPA experimental program)
Rearing Ponds:	3 rearing/release ponds - 82,800 cf, 80,213 cf, and 39,560 cf
Satellite Facilities:	None

Compliance Status

The hatchery audits are based on compliance with written IHOT performance measures. These performance measures are documented in *Policies and Procedures for Columbia Basin Anadromous Salmonid Hatcheries* (referred to as *IHOT 1995* in this report).

The purpose of the performance measures is to implement new basinwide policies that provide regional guidelines for operating anadromous hatcheries in the Columbia Basin.

The audit focuses on performance measures for IHOT policies that cover (1) hatchery performance standards, (2) fish health, (3) ecological interaction, and (4) genetics. These performance measures are intended to guide hatchery operations once production is established. For that reason, the hatchery operations audit included broodstock collection, spawning, incubation of eggs, fish rearing and feeding, fish release, equipment maintenance and operations, and personnel training. Production priorities are beyond the scope of this audit.

Based on *IHOT 1995*, a detailed 109-page audit form was developed. The audit form divided the performance measures into six major sections along major program and technical criteria areas. Two additional sections (sections 1 and 8) include general information and expenditure information needed for this Hatchery Evaluation Report and blank forms for additional comments. The following is the basic structure of the IHOT audit form:

- | | |
|-----------|---|
| Section 1 | Performance Measures for General Information and Expenditure
Information (PMs General 1-2) |
| Section 2 | Performance Measures for Program Objectives (PMs 1-4) |

Integrated Hatchery Operations Team (IHOT) 1995. *Policies and Procedures for Columbia Basin Anadromous Salmonid Hatcheries*, Bonneville Power Administration, Portland, Oregon.

Section 3	Performance Measures for Facility Requirements (PMs 5-15)
Section 4	Performance Measures for Hatchery Practices (PMs 16-25)
Section 5	Performance Measures for Fish Health Policy (PMs 26-34)
Section 6	Performance Measures for Ecological Interactions (PMs 35-38)
Section 7	Performance Measures for Genetics Policy (PMs 39-43)
Section 8	Blank Forms for Additional Comments.

Several performance measures are repeated in various sections of the audit form. These performance measures overlap in *IHOT 1995* and were retained to allow individuals interested in specific portions of the audit (such as Genetics or Fish Health) to determine the compliance status of all performance measures for a given topic in one location. A repeated performance measure is indicated by shaded text.

The Hatchery Audit Process

The hatchery audit will be conducted over a 2-year period that concludes in 1997. At each hatchery, a five-step process was used to complete the overall hatchery audit. This process consisted of research and onsite visits. The site visit at the Klickitat Hatchery was conducted on January 30, 1997.

The following is the five-step audit process:

1. Information was obtained from headquarters.
2. The hatchery manager was asked to fill out and return the **Audit Form**.
3. A 1-2 day site audit visit was conducted at each hatchery. During that visit an audit team inspected facilities, reviewed hatchery records, discussed audit form responses, and developed remedial action plans when appropriate.

4. During the site visit, the compliance status of each performance measure was discussed with the hatchery manager and IHOT representative. A portion of the Hatchery Evaluation Report was sent to the hatchery manager following the audit visit as a **Compliance Report**. That Compliance Report is Table 2 of this report.
5. Information from steps 1-4 was used to prepare a draft **Hatchery Evaluation Report**. This draft report was submitted to the operating agencies for review of the information used to determine compliance. Based on review and comments, a final Hatchery Evaluation Report was developed. The final report documents the compliance of a particular hatchery with the IHOT performance measures and presents cost estimates to correct any deficiencies.

Compliance Status of Klickitat Hatchery - URB Fall Chinook

The following table includes information on life-stages that are held on this facility for some portion of their rearing cycle (Table 1). For multi-facility programs, summary cost and contribution data is presented at the facility where rearing occurs. For the compliance status relating to performance measures that do not occur at this hatchery, please refer to the Hatchery Evaluation Reports for the hatcheries and stocks listed in Table 1. A check mark (✓) indicates that the specific life-stage is held at this facility.

This section documents the compliance status of the Klickitat Hatchery - URB Fall Chinook program. Each performance measure is presented in a table taken from the audit form (Table 2). The compliance status is identified by the following categories:

- **N/A** (not applicable)
- **Yes** (in compliance)
- **?** (unknown; generally due to unavailability of information to determine compliance)
- **No** (not in compliance).

Remedial actions are suggested for performance measures not in compliance. These remedial actions are grouped into categories and listed in Section 4 of this report, where the cost of the required remedial actions is also presented.

Table 1 Summary Program Information for Klickitat Hatchery - URB Fall Chinook

Component	Location of Adult Holding, Spawning, Incubation, and Rearing					
	Priest Rapids, Lyons Ferry, Bonneville, or Wells Hatcheries	Klickitat Hatchery				
Adult Collection	4					
Adult Holding	4					
Spawning	4					
Fertilization	4					
Incubation						
green-to-eyed	4					
eyed-to-hatch		4				
Rearing						
fry		4

PM #	Description of Performance Measure	Compliance Status				Basis for Compliance or Non-Compliance	Remedial Action Needed for Compliance
		N/A	Yes	?	No		
#12	Food storage facilities and quality control						
	Does the storage of dry/semi-moist/moist foods (dry<12%; semi-moist 12-20%; moist >20% moisture) follow food manufacturer's recommendations?		4			Inspection of facilities/Discussion	
	Does a regional quality control officer oversee production procedures and monitor:						
	Verification by feed manufacturer that ingredients meet specifications?				4	Discussion	Conduct IHOT QA/QC tests for feed preparation
	Ensure feed does not contain unwanted drugs or other additives?				4	Discussion	See above
	Analyze ingredients contained in the final food product to ensure that feed specifications have been met?				4	Discussion	See above
	Are the foods stored and handled according to the following criteria?						

Table 2 Klickitat Hatchery - URB Fall Chinook Compliance With Performance Measures

		N/A	Yes	?	No		
	Moist pellets should not exceed 10°F at point of delivery.		4			Discussion	
	Moist pellets should be removed from freezer just prior to feeding.		4			Discussion	
	Do not leave buckets of feed or feed containers outside exposed to light or heat.		4			Discussion	
	Open bags of feed should be fed within 1 to 2 days except when feeding small groups of fish.		4			Discussion	
	Automatic feeder hoppers and bulk storage facilities should be insulated against excessive temperatures (80°F and above).	4				Not used	

Table 2 Klickitat Hatchery - URB Fall Chinook Compliance With Performance Measures

#23 (cont)	Transportation facilities						
	Does the fish transport unit receive an inspection prior to loading?	4				Fish released on station	
	Does a pre-loading inspection covering tank water level, pumps or aerators, oxygen injection system settings, displacement gauge, and truck loading/hauling density tables checked and reviewed occur prior to loading fish in the transport unit?	4				See above	
	Do hauling criteria include checking the fish 45 minutes to 1 hour after loading?	4				See above	
	When fish are active and systems are functioning properly, is the oxygen concentration reduced and maintained at approximately 8 ppm?	4				See above	
	Is water temperature in the transportation unit maintained within the 42-48 °F range?	4				See above	

Table 2 Klickitat Hatchery - URB Fall Chinook Compliance With Performance Measures

		N/A	Yes	?	No		
	Do fish releasing procedures include the following criteria?						
	Releasing the fish at the correct release site or into the correct water body.	4				See above	
	Tempering or the difference between the liberation tank and the target water body should not exceed 10°F.	4				See above	
	The liberation hose should be angled so that fish gently hit the water. Using a tripod is a method of ensuring the hose will stay at the proper angle.	4				See above

PM #	Description of Performance Measure	Compliance Status				Basis for Compliance or Non-Compliance	Remedial Action Needed for Compliance
		N/A	Yes	?	No		
#42	Was the appropriate number of spawners, male/female ratios, and fertilization protocols used?						
#42a	Are the spawning protocols written?	4				Spawning at other hatcheries	
#42b	Are daily or weekly spawning logs available?	4				See above	
#42c	Was the appropriate number of spawners used?	4				See above	
#42d	Did you attempt to spawn all collected broodstock and randomize mating with respect to age class, and other traits?	4				See above	
#42e	Was the sex-ratio within the limits given in the performance standards?	4				See above	
#42f	Were the fertilization protocols followed?	4				See above	
#42g	If the hatchery needed to reduce the number of eggs retained, was this done by representative sampling of each male/female cross?	4				See above	

Table 2 Klickitat Hatchery - URB Fall Chinook Compliance With Performance Measures

PM #	Description of Performance Measure	Compliance Status				Basis for Compliance or Non-Compliance	Remedial Action Needed for Compliance
		N/A	Yes	?	No		
#43	Is there a genetics monitoring and evaluation program in place?						
	Is a genetics monitoring and evaluation program available?				4	None provided	Develop approved genetics M&E plan
	Does the plan address the following elements listed in IHOT:						
	Does the program have elements needed to meet evaluation goals 1-4?				4	See above	See above
	Has a qualified geneticist reviewed and endorsed the program (goal 5)?				4	See above	See above
	Will the program collect the data and maintain the records needed to evaluate compliance on an ongoing basis (goal 5)?				4	See above	See above
	Is the program understood and followed by staff?				4	See above	See above

Remedial Actions

Based on the compliance status for each performance measure, remedial actions were developed. The required remedial actions are organized into five categories. The types of categories range across a spectrum from those actions that are beyond human control, to those that require a change in agency policy or procedures, to those that involve a significant capital cost to put in place. The following are the five types of remedial actions identified under phase 1 of the audit:

The Five Types of Remedial Actions

Type	Description
1	Non-compliance issues resulting from items beyond human control or Performance Measures not relevant for this hatchery
2	Remedial actions requiring changes in agency policies or procedures
3	Remedial actions requiring changes in monitoring coverage or interval
4	Remedial actions requiring significant capital expenditures
5	Remedial actions that may require significant capital expenditures but are not clearly definable at this time

Remedial Actions at Klickitat Hatchery - URB Fall Chinook

This section presents the corrective actions required to bring the Klickitat Hatchery - URB Fall Chinook program into compliance with IHOT performance measures. The remedial actions suggested here are just that, suggestions developed by the Montgomery Watson Audit Team. For some non-compliance areas, other remedial actions could be proposed. The required remedial actions are cross-referenced to each IHOT performance measure that was not in compliance. Where appropriate, the costs associated with the remedial actions are also presented (Table 3).

The cost estimates presented in this section are based on professional experience from similar projects. In most cases, only a lump-sum figure is presented, and detailed take-off lists have not been prepared. The cost estimates are essentially order of magnitude estimates ($\pm 40\%$).

More importantly, the suggested remedial activities may also present several levels of action. Optional actions have been listed for several problems. These optional actions are desirable for either operational or safety considerations.

Table 3. Remedial Actions Required at Klickitat Hatchery - URB Fall Chinook

Remedial Action Required	Cost	PMS ¹
Type 1 - Non-compliance issues resulting from items beyond human control or Performance Measures not relevant for this hatchery		
Increase adult returns	----	4h
Type 2 - Remedial actions requiring changes in agency policies or procedures		
Document adult contribution	----	4a
Review temperature criteria for rearing	----	5a
Follow IHOT protocols for checking flow alarms daily	----	6
Conduct IHOT QA/QC tests for feed preparation	----	12
Develop specific incubation and rearing standards for IHOT Operations Plan	----	18-19
Follow IHOT flow and loading criteria for incubation or change criteria	----	18
Develop smoltification goal and monitor	----	22a1
Develop approved genetics M&E plan	----	43
Type 3 - Remedial actions requiring changes in monitoring coverage or interval		
Monitor and record DO and TGP	----	5b
Run analysis for water chemistry parameters, turbidity, alkalinity, hardness, nitrite, and contaminants	----	5c-5g

Remedial Action Required	Cost	PMS ²
Type 4 - Remedial actions requiring significant capital expenditures		
Install alarms at 3 intakes and 2 ponds	\$40,000	6
Install security alarms	\$10,000	6
Install telephone pagers	5,000	6
Provide new screening system for river (8,000 gpm) and 1 creeks	\$150,000	10
Provide bird screening for 108,000 sf of rearing area	\$200,000	11
Type 5 - Remedial actions that may require significant capital expenditures but are not clearly definable at this time		
Provide disease-free water for incubation and early rearing	----	5h, 28
Develop additional water supply for rearing or construct water reuse system	----	19

Hatchery Contribution to Fisheries, Spawning Grounds, and Hatcheries

This section presents the audit findings for the Klickitat Hatchery - URB Fall Chinook program contribution of adult fish to fisheries, local fisheries, spawning grounds, and hatcheries. Data is reported by broodyear. A broodyear refers to the adult contribution from the eggs produced from a single group of spawning adults. For some species, this may include fish caught as 2-, 3-, 4-, 5-, and 6-year old fish. Because of the return distribution and data processing delays, the complete adult contribution for a given broodyear may not be available until 4 to 5 years after the fish have been released from the hatchery.

**Table 4. Adult Contribution to Fisheries, Spawning Grounds, and Hatcheries:
Klickitat Hatchery - URB Fall Chinook**

Year	Fisheries (Broodyear)	Spawning Grounds¹ (Broodyear)	Hatchery¹ (Broodyear)	Total Combined Contribution (Broodyear)	Smolt to Adult Survival (percent)
1982					
1983					

Data obtained from Missing Production Groups Annual Report or from the Regional Mark Information System database.

Total combined adult contribution; presented when it is not possible to subdivide the contribution into fisheries, spawning grounds, and hatchery contributions.

1992					

Annual Operating Expenditures

The level and detail of annual operating expenditures varies widely depending on hatchery, operating agency, and funding source. When provided, expenditures were presented in terms of personnel costs, operating costs (power, feed, supplies), capital costs, indirect costs charged to the federal government, third-party costs, and other costs. These cost components were summed to determine a total hatchery annual cost. Based on discussion with the hatchery manager, the percent of total hatchery costs allocated to a given program was estimated. The total hatchery costs and the percent of hatchery costs allocated to a given program were used to compute the cost of a given program. Table 5 shows the annual operating expenses for the Klickitat Hatchery - URB Fall Chinook program. For programs that occur at more than one facility (as shown on Table 1 in Section 3 of this report), the cost breakdown for the component(s) at each facility is presented in separate tables (Table 5a).

Table 5. Annual Operating Expenses: Klickitat Hatchery - URB Fall Chinook

Hatchery	1994	1995	1996
1. Klickitat Hatchery	\$102,060	\$139,720	\$150,080
2.			
3.
